INTRODUCTION

Since 1979, the US Travel Data Center has conducted a monthly National Travel Survey to provide timely and relevant information on major trends in American travel activity. The survey is conducted by telephone with national probability samples of 1,500 adult residents of the contiguous U.S. each month.

Seasonal and annual summaries of results are published regularly for use by Data Center members and other interested marketers and researchers. This report on winter 1988-89 travel and other reports from the Data Center's National Travel Survey contribute to a better understanding of changing travel markets.

This TRAVEL MARKET CLOSE-UP provides detailed tabulations of the National Travel Survey. Offering extensive data on trip characteristics and traveler demographics not usually available, this CLOSE-UP report serves as a supplement to the companion volume, TRAVEL EXECUTIVE BRIEFING report. While the BRIEFING provides a summary of seasonal and annual travel information, the CLOSE-UP presents cross-tabulations in much greater detail.

The winter 1988-89 TRAVEL MARKET CLOSE-UP encompasses U.S. resident travel over December 1988, January and February 1989, measured through the monthly National Travel Survey. The tables are based on projected volumes of "trips" and "person-trips", as defined below.

Travel volumes and characteristics are projectable to the U.S. adult population of 179.3 million. For example, an estimated volume of 135.0 million trips were taken by U.S. resident adults during the winter of 1988-89. A trip is counted each time one adult travels 100 miles or more away from home, and returns.

The term "person-trip" individually counts all of the household members traveling together on a trip. Thus the estimated 246.2 million total person-trips for winter 1987-88 includes adults and children traveling away from home on trips.

Because the sample for the National Travel Survey is representative of the contiguous U.S. adult population, data from this report are limited to travel by U.S. residents to both domestic and international destinations. This report does not include data on foreign visitor activity in the U.S.

GUIDE TO READING TABLES

The TRAVEL MARKET CLOSE-UP is divided into three sections:

Tables	Base	Pages
Trip Characteristics	Trips	1 - 30
Trip Characteristics	Person-Trips	31 - 60
Demographic Characteristics	Trips	61 - 75

There are three pages for each table, showing a variety of types of travel, demographic characteristics and regions of destination and origin. A key to abbreviations for all column headings is given on the following page.

In addition to the projected travel volume base, each table gives the "raw total" respondent base for all types of travel presented. Raw totals are the actual number of trips taken by respondents, excluding multiple identical trips taken by the same respondent.

Column percentages should add to 100 percent (may vary a few percentage points due to rounding), except for the primary purpose of trip and lodging tables which may add to more than 100 percent due to multiple responses.

The final section characterizes the volume of trips taken according to several demographic and household characteristics of adult travelers. For example, marital status, sex, age, education and occupation refer to the adult traveler reporting one or more qualifying trips. Family income, household structure and home ownership characterize the households of these adult travelers.

GLOSSARY OF TERMS

ADI. An ADI or area of dominant influence, as defined by the Arbitron Ratings Company, includes all counties in which television stations from a given city are watched more than television stations from any other city. Therefore, an ADI includes not only the metropolitan statistical area (MSA), but also all the surrounding towns and counties receiving the major share of their television exposure from that point.

ADI of Destination. Following Arbitron's standards, four county types are identified: "A" Counties are those counties located in the 25 most populated metropolitan statistical areas (MSAs) in the U.S.; "B" Counties have populations of or are located within MSAs of over 150,000 (but are not"A" counties); "C" Counties have populations of or are located within MSAs of 35,000 to 150,000; "D" Counties describe all others. Also, those who visit the actual city within the top 25 MSAs are shown as a component of the "A" County category.

ADI of Origin. The geographic area of origin is defined as the ADI in which the respondent resides. Following Arbitron's standards, the ADIs of origin are classified according to four population categories: Over one million (large); 250,000 to 999,999 (medium); 50,000 to 249,999 (small); and under 50,000 (also small).

Air Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "airplane."

Auto Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "auto or truck without camping equipment, auto or truck with camper trailer or camping equipment, or self-contained recreational vehicle (live-in camper or RV)."

Business Trip. Any trip where the purpose of the trip is given as "business, convention, seminar or meeting."

Census Region of Origin/Destination. Regional breakdowns of the U.S. are as defined by the U.S. Bureau of the Census: New England, Mid-Atlantic, South Atlantic, East South Central, East North Central, West South Central, West North Central, Mountain, and Pacific.

Destination. The farthest destination reached by the respondent on one trip.

Family. A "family" includes the household head and all relatives who are currently members of the household.

Family Income. The total combined annual income of the respondent's family.

Household. A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment, or other group of rooms, or a room that constitutes separate living quarters.

Lodging. Information is gathered on seven lodging categories: (1) homes of friends and relatives, (2) hotels, motels, motor hotels and tourist courts, (3) rented cabins, condominiums and vacation homes, (4) owned cabins, condominiums and vacation homes, (5) campers, trailers, recreational vehicles, and tents, (6) enroute, for example, nights spent in a common carrier, and (7) other.

Mode of Transportation. Each trip is classified according to the respondent's answer to the question, "What was the one type of transportation used to cover most of the miles on this trip?" The survey gathers data by eight classifications: (1) auto or truck without camping equipment, (2) auto or truck with camper trailer or camping equipment, (3) self-contained recreational vehicle (live-in trailer), (4) airplane, (5) bus, (6) train, (7) ship or boat, and (8) other.

Metropolitan Statistical Area. A Metropolitan Statistical Area (MSA) is an integrated economic and social unit with a large population nucleus. Each MSA consists of one or more counties meeting standards of population and metropolitan character, except New England where towns and cities rather than counties are the basic geographic units.

Nights Away from Home. The number of nights spent away from home on one trip, including nights spent at the destination and enroute. It is possible for a trip not to involve an overnight away from home if the traveler took a trip of 100 miles or more and returned home the same day.

Outside the U.S. The geographic area comprising all foreign destinations.

Package Tour. A pre-paid travel package which includes at least a place to stay and transportation by air or bus.

Person-Trip. This is a person on a trip. If one person reported three different trips, his/her travel is counted as three trips and three person-trips. If three persons from a household go together on one trip, their travel is counted as one trip and three person-trips.

Pleasure Trip. Any trip where the purpose of the trip is given as "visits to friends and relatives, outdoor recreation (hunting, fishing, boating, camping) or entertainment (sightseeing, theater, sports)."

Primary Purpose of Trip. The primary purpose is the main activity on this trip and is classified as follows: (1) visit friends and relatives, (2) convention, seminar, meeting, (3) business, (4) outdoor recreation (hunting, fishing, boating, camping), (5) entertainment (sightseeing, theater, sports), (6) personal, family (medical, funeral, wedding), and (7) other.

The main purpose for the trip is ascribed to each person on the trip. If a trip is taken by the respondent and two other people traveling with him/her to visit friends and relatives, three person-trips are counted for this purpose.

Projected Total. These figures are the estimated number of trips or person-trips projected to have been taken by U.S. residents. The estimated trip volume is projected to the U.S. resident adult population, while the person-trip volume covers all travelers (children included).

Raw Total. This is the actual number trips taken by respondents with the exception of multiple identical trips taken by the same respondent.

Respondent. This is the person completing the telephone interview.

Round-Trip Miles. These are the twice the calculated one-way, straight-line miles from origin to destination. These are calculated for domestic trips only. See "Straight-Line Miles."

Straight-Line Miles. This is a "great circle" distance approximation using mathematically derived coordinates. Straight-line miles are calculated by computer program and adjusted to trip distance.

Travel Party Size. Americans traveling together are categorized by size according to the number of household members on a trip.

Travel Party Structure. The age and number of household members on a trip determine the party structure of a trip.

Traveler. Respondents who make one or more trips at least 100 miles away from home are counted as travelers. Travelers are only counted once regardless of how many trips are taken or how many people are on the trip.

Trip. A trip is counted each time one person goes to a place at least 100 miles away from home and returns. The following types of trips are specifically excluded: (1) travel as part of an operation crew on a train, airplane, truck, bus or ship, (2) commuting to a place of work, and (3) student trips to or from school.

In this survey, respondents are asked to report all trips of 75 miles or more, one-way, taken during the month immediately preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimates of trips. This is done in an effort to minimize failure to report trips of 100 miles or more due to respondent error in recall.

Vacation Trip. Vacation is considered to be an occasion when trips are taken, but is not listed as a purpose or reason for travel. The respondent is asked for each trip reported, "Was this a vacation trip?"

Weekend Trip. Each trip was classified as to whether it is weekend trip by asking the respondents, "Was this a weekend or long weekend trip" for each trip reported.

NATIONAL TRAVEL SURVEY METHODOLOGY

The National Travel Survey is based upon data collected each month by telephone interviews from a national probability sample of 1,500 adults (age 18+) representing the total adult, civilian, non-institutional population of the contiguous United States. The sample design is a two-stage, stratified, internally replicated national probability sample using a new sample each month.

Respondents are asked about all trips of 75 miles or more, one-way, taken during the month preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimate of the number of trips. Starting in 1986, data are also being collected on trips of less than 100 miles which included one or more nights spent in paid accommodations. Demographic information is collected from all 1,500 respondents each month. In addition, a random sample of 1,000 respondents (both travelers and non-travelers) are asked a series of questions concerning vacation travel intentions.

In projecting results, an unequal probability of selection of individuals is corrected by weighting all respondents where the weight given each individual is inversely proportional to the probability of selection of the individual. Such weighting is used to correct for the limitation of one respondent per household in order to give a more accurate count of all trips taken and to correct for unequal probabilities of selection among household members. Weighting is also done when necessary by demographic factors to compensate for any random variation in response.

ESTIMATES OF SAMPLING ERROR

Theoretical estimates for the key projections of this survey are only able to provide a rough indication of sampling error, because of weighting, clustering and response rate. For these reasons, the sample was designed to utilize the method of internal replication to obtain a more accurate measure of actual sampling error. Accordingly, the following table may be used as a guide in determining the range for the major categories of projected trips and person-trips at the 95 percent confidence level.

ESTIMATES OF SAMPLING ERROR FOR PROJECTED TRAVEL VOLUMES

	TRIPS (MILLIONS)		PERSON-TRIPS (MILLIONS)

INTRODUCTION

Since 1979, the US Travel Data Center has conducted a monthly National Travel Survey to provide timely and relevant information on major trends in American travel activity. The survey is conducted by telephone with national probability samples of 1,500 adult residents of the contiguous U.S. each month.

Seasonal and annual summaries of results are published regularly for use by Data Center members and other interested marketers and researchers. This report on spring 1989 travel and other reports from the Data Center's National Travel Survey contribute to a better understanding of changing travel markets.

This TRAVEL MARKET CLOSE-UP provides detailed tabulations of the National Travel Survey. Offering extensive data on trip characteristics and traveler demographics not usually available, this CLOSE-UP report serves as a supplement to the companion volume, TRAVEL EXECUTIVE BRIEFING report. While the BRIEFING provides a summary of seasonal and annual travel information, the CLOSE-UP presents cross-tabulations in much greater detail.

The spring 1989 TRAVEL MARKET CLOSE-UP encompasses U.S. resident travel over March, April and May 1989, measured through the monthly National Travel Survey. The tables are based on projected volumes of "trips" and "person-trips", as defined below.

Travel volumes and characteristics are projectable to the U.S. adult population of 179.9 million. For example, an estimated volume of 146.1 million trips were taken by U.S. resident adults during the spring of 1989. A trip is counted each time one adult travels 100 miles or more away from home, and returns.

The term "person-trip" individually counts all of the household members traveling together on a trip. Thus the estimated 275.7 million total person-trips for spring 1989 includes adults and children traveling away from home on trips.

Because the sample for the National Travel Survey is representative of the contiguous U.S. adult population, data from this report are limited to travel by U.S. residents to both domestic and international destinations. This report does not include data on foreign visitor activity in the U.S.

GUIDE TO READING TALLES

The TRAVEL MARKET CLOSE-UP is divided into three sections:

Tables	Base	Pages
Trip Characteristics	Trips	1 - 30
Trip Characteristics	Person-Trips	31 - 60
Demographic Characteristics	Trips	61 - 75

There are three pages for each table, showing a variety of types of travel, demographic characteristics and regions of destination and origin. A key to abbreviations for all column headings is given on the following page.

In addition to the projected travel volume base, each table gives the "raw total" respondent base for all types of travel presented. Raw totals are the actual number of trips taken by respondents, excluding multiple identical trips taken by the same respondent.

Column percentages should add to 100 percent (may vary a few percentage points due to rounding), except for the primary purpose of trip and lodging tables which may add to more than 100 percent due to multiple responses.

The final section characterizes the volume of trips taken according to several demographic and household characteristics of adult travelers. For example, marital status, sex, age, education and occupation refer to the adult traveler reporting one or more qualifying trips. Family income, household structure and home ownership characterize the households of these adult travelers.

GLOSSARY OF TERMS

ADI. An ADI or area of dominant influence, as defined by the Arbitron Ratings Company, includes all counties in which television stations from a given city are watched more than television stations from any other city. Therefore, an ADI includes not only the metropolitan statistical area (MSA), but also all the surrounding towns and counties receiving the major share of their television exposure from that point.

ADI of Destination. Following Arbitron's standards, four county types are identified: "A" Counties are those counties located in the 25 most populated metropolitan statistical areas (MSAs) in the U.S.; "B" Counties have populations of or are located within MSAs of over 150,000 (but are not"A" counties); "C" Counties have populations of or are located within MSAs of 35,000 to 150,000; "D" Counties describe all others. Also, those who visit the actual city within the top 25 MSAs are shown as a component of the "A" County category.

ADI of Origin. The geographic area of origin is defined as the ADI in which the respondent resides. Following Arbitron's standards, the ADIs of origin are classified according to four population categories: Over one million (large); 250,000 to 999,999 (medium); 50,000 to 249,999 (small); and under 50,000 (also small).

Air Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "airplane."

Auto Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "auto or truck without camping equipment, auto or truck with camper trailer or camping equipment, or self-contained recreational vehicle (live-in camper or RV)."

Business Trip. Any trip where the purpose of the trip is given as "business, convention, seminar or meeting."

Census Region of Origin/Destination. Regional breakdowns of the U.S. are as defined by the U.S. Bureau of the Census: New England, Mid-Atlantic, South Atlantic, East South Central, East North Central, West South Central, West North Central, Mountain, and Pacific.

Destination. The farthest destination reached by the respondent on one trip.

Family. A "family" includes the household head and all relatives who are currently members of the household.

Family Income. The total combined annual income of the respondent's family.

Household. A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment, or other group of rooms, or a room that constitutes separate living quarters.

Lodging. Information is gathered on seven lodging categories: (1) homes of friends and relatives, (2) hotels, motels, motor hotels and tourist courts, (3) rented cabins, condominiums and vacation homes, (4) owned cabins, condominiums and vacation homes, (5) campers, trailers, recreational vehicles, and tents, (6) enroute, for example, nights spent in a common carrier, and (7) other.

Mode of Transportation. Each trip is classified according to the respondent's answer to the question, "What was the one type of transportation used to cover most of the miles on this trip?" The survey gathers data by eight classifications: (1) auto or truck without camping equipment, (2) auto or truck with camper trailer or camping equipment, (3) self-contained recreational vehicle (live-in trailer), (4) airplane, (5) bus, (6) train, (7) ship or boat, and (8) other.

Metropolitan Statistical Area. A Metropolitan Statistical Area (MSA) is an integrated economic and social unit with a large population nucleus. Each MSA consists of one or more counties meeting standards of population and metropolitan character, except New England where towns and cities rather than counties are the basic geographic units.

Nights Away from Home. The number of nights spent away from home on one trip, including nights spent at the destination and enroute. It is possible for a trip not to involve an overnight away from home if the traveler took a trip of 100 miles or more and returned home the same day.

Outside the U.S. The geographic area comprising all foreign destinations.

Package Tour. A pre-paid travel package which includes at least a place to stay and transportation by air or bus.

Person-Trip. This is a person on a trip. If one person reported three different trips, his/her travel is counted as three trips and three person-trips. If three persons from a household go together on one trip, their travel is counted as one trip and three person-trips.

Pleasure Trip. Any trip where the purpose of the trip is given as "visits to friends and relatives, outdoor recreation (hunting, fishing, boating, camping) or entertainment (sightseeing, theater, sports)."

Primary Purpose of Trip. The primary purpose is the main activity on this trip and is classified as follows: (1) visit friends and relatives, (2) convention, seminar, meeting, (3) business, (4) outdoor recreation (hunting, fishing, boating, camping), (5) entertainment (sightseeing, theater, sports), (6) personal, family (medical, funeral, wedding), and (7) other.

The main purpose for the trip is ascribed to each person on the trip. If a trip is taken by the respondent and two other people traveling with him/her to visit friends and relatives, three person-trips are counted for this purpose.

Projected Total. These figures are the estimated number of trips or person-trips projected to have been taken by U.S. residents. The estimated trip volume is projected to the U.S. resident adult population, while the person-trip volume covers all travelers (children included).

Raw Total. This is the actual number trips taken by respondents with the exception of multiple identical trips taken by the same respondent.

Respondent. This is the person completing the telephone interview.

Round-Trip Miles. These are the twice the calculated one-way, straight-line miles from origin to destination. These are calculated for domestic trips only. See "Straight-Line Miles."

Straight-Line Miles. This is a "great circle" distance approximation using mathematically derived coordinates. Straight-line miles are calculated by computer program and adjusted to trip distance.

Travel Party Size. Americans traveling together are categorized by size according to the number of household members on a trip.

Travel Party Structure. The age and number of household members on a trip determine the party structure of a trip.

Traveler. Respondents who make one or more trips at least 100 miles away from home are counted as travelers. Travelers are only counted once regardless of how many trips are taken or how many people are on the trip.

Trip. A trip is counted each time one person goes to a place at least 100 miles away from home and returns. The following types of trips are specifically excluded: (1) travel as part of an operation crew on a train, airplane, truck, bus or ship, (2) commuting to a place of work, and (3) student trips to or from school.

In this survey, respondents are asked to report all trips of 75 miles or more, one-way, taken during the month immediately preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimates of trips. This is done in an effort to minimize failure to report trips of 100 miles or more due to respondent error in recall.

Vacation Trip. Vacation is considered to be an occasion when trips are taken, but is not listed as a purpose or reason for travel. The respondent is asked for each trip reported, "Was this a vacation trip?"

Weekend Trip. Each trip was classified as to whether it is weekend trip by asking the respondents, "Was this a weekend or long weekend trip" for each trip reported.

NATIONAL TRAVEL SURVEY METHODOLOGY

The National Travel Survey is based upon data collected each month by telephone interviews from a national probability sample of 1,500 adults (age 18+) representing the total adult, civilian, non-institutional population of the contiguous United States. The sample design is a two-stage, stratified, internally replicated national probability sample using a new sample each month.

Respondents are asked about all trips of 75 miles or more, one-way, taken during the month preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimate of the number of trips. Starting in 1986, data are also being collected on trips of less than 100 miles which included one or more nights spent in paid accommodations. Demographic information is collected from all 1,500 respondents each month. In addition, a random sample of 1,000 respondents (both travelers and non-travelers) are asked a series of questions concerning vacation travel intentions.

In projecting results, an unequal probability of selection of individuals is corrected by weighting all respondents where the weight given each individual is inversely proportional to the probability of selection of the individual. Such weighting is used to correct for the limitation of one respondent per household in order to give a more accurate count of all trips taken and to correct for unequal probabilities of selection among household members. Weighting is also done when necessary by demographic factors to compensate for any random variation in response.

ESTIMATES OF SAMPLING ERROR

Theoretical estimates for the key projections of this survey are only able to provide a rough indication of sampling error, because of weighting, clustering and response rate. For these reasons, the sample was designed to utilize the method of internal replication to obtain a more accurate measure of actual sampling error. Accordingly, the following table may be used as a guide in determining the range for the major categories of projected trips and person-trips at the 95 percent confidence level.

INTRODUCTION

Since 1979, the US Travel Data Center has conducted a monthly National Travel Survey to provide timely and relevant information on major trends in American travel activity. The survey is conducted by telephone with national probability samples of 1,500 adult residents of the contiguous U.S. each month.

Seasonal and annual summaries of results are published regularly for use by Data Center members and other interested marketers and researchers. This report on summer 1989 travel and other reports from the Data Center's National Travel Survey contribute to a better understanding of changing travel markets.

This TRAVEL MARKET CLOSE-UP provides detailed tabulations of the National Travel Survey. Offering extensive data on trip characteristics and traveler demographics not usually available, this CLOSE-UP report serves as a complement to the TRAVEL EXECUTIVE BRIEFING report. While the BRIEFING provides a summary of seasonal and annual travel information, the CLOSE-UP presents cross-tabulations in much greater detail.

The summer 1989 TRAVEL MARKET CLOSE-UP encompasses U.S. resident travel over June, July and August 1989, measured through the monthly National Travel Survey. The tables are based on projected volumes of "trips" and "person-trips", as defined below.

Travel volumes and characteristics are projectable to the U.S. adult population of 179.0 million. For example, an estimated volume of 212.2 million trips were taken by U.S. resident adults during the summer of 1989. A trip is counted each time one adult travels 100 miles or more away from home and returns.

The term "person-trip" individually counts all of the household members traveling together on a trip. Thus, the estimated 427.7 million total person-trips for summer 1989 includes adults and children traveling away from home on trips.

Because the sample for the National Travel Survey is representative of the contiguous U.S. adult population, data from this report are limited to travel by U.S. residents to both domestic and international destinations. This report does not include data on foreign visitor activity in the U.S.

GUIDE TO READING TABLES

The TRAVEL MARKET CLOSE-UP is divided into three sections:

Tables	Base	Pages
Trip Characteristics	Trips	1 - 30
Trip Characteristics	Person-Trips	31 - 60
Demographic Characteristics	Trips	61 - 75

There are three pages for each table, showing a variety of types of travel, demographic characteristics and regions of destination and origin. A key to abbreviations for all column headings is given on the following page.

In addition to the projected travel volume base, each table gives the "raw total" respondent base for all types of travel presented. Raw totals are the actual number of trips taken by respondents, excluding multiple identical trips taken by the same respondent.

Column percentages should add to 100 percent (may vary a few percentage points due to rounding), except for the primary purpose of trip and lodging tables which may add to more than 100 percent due to multiple responses.

The final section characterizes the volume of trips taken according to several demographic and household characteristics of adult travelers. For example, marital status, sex, age, education and occupation refer to the adult traveler reporting one or more qualifying trips. Family income, household structure and home ownership characterize the households of these adult travelers.

GLOSSARY OF TERMS

ADI. An ADI or area of dominant influence, as defined by the Arbitron Ratings Company, includes all counties in which television stations from a given city are watched more than television stations from any other city. Therefore, an ADI includes not only the metropolitan statistical area (MSA), but also all the surrounding towns and counties receiving the major share of their television exposure from that point.

ADI of Destination. Following Arbitron's standards, four county types are identified: "A" Counties are those counties located in the 25 most populated metropolitan statistical areas (MSAs) in the U.S.; "B" Counties have populations of or are located within MSAs of over 150,000 (but are not"A" counties); "C" Counties have populations of or are located within MSAs of 35,000 to 150,000; "D" Counties describe all others. Also, those who visit the actual city within the top 25 MSAs are shown as a component of the "A" County category.

ADI of Origin. The geographic area of origin is defined as the ADI in which the respondent resides. Following Arbitron's standards, the ADIs of origin are classified according to four population categories: Over one million (large); 250,000 to 999,999 (medium); 50,000 to 249,999 (small); and under 50,000 (also small).

Air Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "airplane."

Auto Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "auto or truck without camping equipment, auto or truck with camper trailer or camping equipment, or self-contained recreational vehicle (live-in camper or RV)."

Business Trip. Any trip where the purpose of the trip is given as "business, convention, seminar or meeting."

Census Region of Origin/Destination. Regional breakdowns of the U.S. are as defined by the U.S. Bureau of the Census: New England, Mid-Atlantic, South Atlantic, East South Central, East North Central, West South Central, West North Central, Mountain, and Pacific.

Destination. The farthest destination reached by the respondent on one trip.

Family. A "family" includes the household head and all relatives who are currently members of the household.

Family Income. The total combined annual income of the respondent's family.

Household. A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment, or other group of rooms, or a room that constitutes separate living quarters.

Lodging. Information is gathered on seven lodging categories: (1) homes of friends and relatives, (2) hotels, motels, motor hotels and tourist courts, (3) rented cabins, condominiums and vacation homes, (4) owned cabins, condominiums and vacation homes, (5) campers, trailers, recreational vehicles, and tents, (6) enroute, for example, nights spent in a common carrier, and (7) other.

Mode of Transportation. Each trip is classified according to the respondent's answer to the question, "What was the one type of transportation used to cover most of the miles on this trip?" The survey gathers data by eight classifications: (1) auto or truck without camping equipment, (2) auto or truck with camper trailer or camping equipment, (3) self-contained recreational vehicle (live-in trailer), (4) airplane, (5) bus, (6) train, (7) ship or boat, and (8) other.

Metropolitan Statistical Area. A Metropolitan Statistical Area (MSA) is an integrated economic and social unit with a large population nucleus. Each MSA consists of one or more counties meeting standards of population and metropolitan character, except New England where towns and cities rather than counties are the basic geographic units.

Nights Away from Home. The number of nights spent away from home on one trip, including nights spent at the destination and enroute. It is possible for a trip not to involve an overnight away from home if the traveler took a trip of 100 miles or more and returned home the same day.

Outside the U.S. The geographic area comprising all foreign destinations.

Package Tour. A pre-paid travel package which includes at least a place to stay and transportation by air or bus.

Person-Trip. This is a person on a trip. If one person reported three different trips, his/her travel is counted as three trips and three person-trips. If three persons from a household go together on one trip, their travel is counted as one trip and three person-trips.

Pleasure Trip. Any trip where the purpose of the trip is given as "visits to friends and relatives, outdoor recreation (hunting, fishing, boating, camping) or entertainment (sightseeing, theater, sports)."

Primary Purpose of Trip. The primary purpose is the main activity on this trip and is classified as follows: (1) visit friends and relatives, (2) convention, seminar, meeting, (3) business, (4) outdoor recreation (hunting, fishing, boating, camping), (5) entertainment (sightseeing, theater, sports), (6) personal, family (medical, funeral, wedding), and (7) other.

The main purpose for the trip is ascribed to each person on the trip. If a trip is taken by the respondent and two other people traveling with him/her to visit friends and relatives, three person-trips are counted for this purpose.

Projected Total. These figures are the estimated number of trips or person-trips projected to have been taken by U.S. residents. The estimated trip volume is projected to the U.S. resident adult population, while the person-trip volume covers all travelers (children included).

Raw Total. This is the actual number trips taken by respondents with the exception of multiple identical trips taken by the same respondent.

Respondent. This is the person completing the telephone interview.

Round-Trip Miles. These are the twice the calculated one-way, straight-line miles from origin to destination. These are calculated for domestic trips only. See "Straight-Line Miles."

Straight-Line Miles. This is a "great circle" distance approximation using mathematically derived coordinates. Straight-line miles are calculated by computer program and adjusted to trip distance.

Travel Party Size. Americans traveling together are categorized by size according to the number of household members on a trip.

Travel Party Structure. The age and number of household members on a trip determine the party structure of a trip.

Traveler. Respondents who make one or more trips at least 100 miles away from home are counted as travelers. Travelers are only counted once regardless of how many trips are taken or how many people are on the trip.

Trip. A trip is counted each time one person goes to a place at least 100 miles away from home and returns. The following types of trips are specifically excluded: (1) travel as part of an operation crew on a train, airplane, truck, bus or ship, (2) commuting to a place of work, and (3) student trips to or from school.

In this survey, respondents are asked to report all trips of 75 miles or more, one-way, taken during the month immediately preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimates of trips. This is done in an effort to minimize failure to report trips of 100 miles or more due to respondent error in recall.

Vacation Trip. Vacation is considered to be an occasion when trips are taken, but is not listed as a purpose or reason for travel. The respondent is asked for each trip reported, "Was this a vacation trip?"

Weekend Trip. Each trip was classified as to whether it is weekend trip by asking the respondents, "Was this a weekend or long weekend trip" for each trip reported.

NATIONAL TRAVEL SURVEY METHODOLOGY

The National Travel Survey is based upon data collected each month by telephone interviews from a national probability sample of 1,500 adults (age 18+) representing the total adult, civilian, non-institutional population of the contiguous United States. The sample design is a two-stage, stratified, internally replicated national probability sample using a new sample each month.

Respondents are asked about all trips of 75 miles or more, one-way, taken during the month preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimate of the number of trips. Starting in 1986, data are also being collected on trips of less than 100 miles which included one or more nights spent in paid accommodations. Demographic information is collected from all 1,500 respondents each month. In addition, a random sample of 1,000 respondents (both travelers and non-travelers) are asked a series of questions concerning vacation travel intentions.

In projecting results, an unequal probability of selection of individuals is corrected by weighting all respondents where the weight given each individual is inversely proportional to the probability of selection of the individual. Such weighting is used to correct for the limitation of one respondent per household in order to give a more accurate count of all trips taken and to correct for unequal probabilities of selection among household members. Weighting is also done when necessary by demographic factors to compensate for any random variation in response.

ESTIMATES OF SAMPLING ERROR

Theoretical estimates for the key projections of this survey are only able to provide a rough indication of sampling error, because of weighting, clustering and response rate. For these reasons, the sample was designed to utilize the method of internal replication to obtain a more accurate measure of actual sampling error. Accordingly, the following table may be used as a guide in determining the range for the major categories of projected trips and person-trips at the 95 percent confidence level.

ESTIMATES OF SAMPLING ERROR FOR PROJECTED TRAVEL VOLUMES

INTRODUCTION

Since 1979, the US Travel Data Center has conducted a monthly National Travel Survey to provide timely and relevant information on major trends in American travel activity. The survey is conducted by telephone with national probability samples of 1,500 adult residents of the contiguous U.S. each month.

Seasonal and annual summaries of results are published regularly for use by Data Center members and other interested marketers and researchers. This report on autumn 1989 travel and other reports from the Data Center's National Travel Survey contribute to a better understanding of changing travel markets.

This TRAVEL MARKET CLOSE-UP provides detailed tabulations of the National Travel Survey. Offering extensive data on trip characteristics and traveler demographics not usually available, this CLOSE-UP report serves as a complement to the TRAVEL EXECUTIVE BRIEFING report. While the BRIEFING provides a summary of seasonal and annual travel information, the CLOSE-UP presents cross-tabulations in much greater detail.

The autumn 1989 TRAVEL MARKET CLOSE-UP encompasses U.S. resident travel over September, October and November 1989, measured through the monthly National Travel Survey. The tables are based on projected volumes of "trips" and "person-trips", as defined below.

Travel volumes and characteristics are projectable to the U.S. adult population of 180.5 million. For example, an estimated volume of 168.1 million trips were taken by U.S. resident adults during the autumn of 1989. A trip is counted each time one adult travels 100 miles or more away from home and returns.

The term "person-trip" individually counts all of the household members traveling together on a trip. Thus, the estimated 305.4 million total person-trips for autumn 1989 includes adults and children traveling away from home on trips.

Because the sample for the National Travel Survey is representative of the contiguous U.S. adult population, data from this report are limited to travel by U.S. residents to both domestic and international destinations. This report does not include data on foreign visitor activity in the U.S.

GUIDE TO READING TABLES

The TRAVEL MARKET CLOSE-UP is divided into three sections:

Tables	Base	Pages
Trip Characteristics	Trips	1 - 30
Trip Characteristics	Person-Trips	31 - 60
Demographic Characteristics	Trips	61 - 75

There are three pages for each table, showing a variety of types of travel, demographic characteristics and regions of destination and origin. A key to abbreviations for all column headings is given on the following page.

In addition to the projected travel volume base, each table gives the "raw total" respondent base for all types of travel presented. Raw totals are the actual number of trips taken by respondents, excluding multiple identical trips taken by the same respondent.

Column percentages should add to 100 percent (may vary a few percentage points due to rounding), except for the primary purpose of trip and lodging tables which may add to more than 100 percent due to multiple responses.

The final section characterizes the volume of trips taken according to several demographic and household characteristics of adult travelers. For example, marital status, sex, age, education and occupation refer to the adult traveler reporting one or more qualifying trips. Family income, household structure and home ownership characterize the households of these adult travelers.

GLOSSARY OF TERMS

ADI. An ADI or area of dominant influence, as defined by the Arbitron Ratings Company, includes all counties in which television stations from a given city are watched more than television stations from any other city. Therefore, an ADI includes not only the metropolitan statistical area (MSA), but also all the surrounding towns and counties receiving the major share of their television exposure from that point.

ADI of Destination. Following Arbitron's standards, four county types are identified: "A" Counties are those counties located in the 25 most populated metropolitan statistical areas (MSAs) in the U.S.; "B" Counties have populations of or are located within MSAs of over 150,000 (but are not"A" counties); "C" Counties have populations of or are located within MSAs of 35,000 to 150,000; "D" Counties describe all others. Also, those who visit the actual city within the top 25 MSAs are shown as a component of the "A" County category.

ADI of Origin. The geographic area of origin is defined as the ADI in which the respondent resides. Following Arbitron's standards, the ADIs of origin are classified according to four population categories: Over one million (large); 250,000 to 999,999 (medium); 50,000 to 249,999 (small); and under 50,000 (also small).

Air Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "airplane."

Auto Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "auto or truck without camping equipment, auto or truck with camper trailer or camping equipment, or self-contained recreational vehicle (live-in camper or RV)."

Business Trip. Any trip where the purpose of the trip is given as "business, convention, seminar or meeting."

Census Region of Origin/Destination. Regional breakdowns of the U.S. are as defined by the U.S. Bureau of the Census: New England, Mid-Atlantic, South Atlantic, East South Central, East North Central, West South Central, West North Central, Mountain, and Pacific.

Destination. The farthest destination reached by the respondent on one trip.

Family. A "family" includes the household head and all relatives who are currently members of the household.

Family Income. The total combined annual income of the respondent's family.

Household. A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment, or other group of rooms, or a room that constitutes separate living quarters.

Lodging. Information is gathered on seven lodging categories: (1) homes of friends and relatives, (2) hotels, motels, motor hotels and tourist courts, (3) rented cabins, condominiums and vacation homes, (4) owned cabins, condominiums and vacation homes, (5) campers, trailers, recreational vehicles, and tents, (6) enroute, for example, nights spent in a common carrier, and (7) other.

Mode of Transportation. Each trip is classified according to the respondent's answer to the question, "What was the one type of transportation used to cover most of the miles on this trip?" The survey gathers data by eight classifications: (1) auto or truck without camping equipment, (2) auto or truck with camper trailer or camping equipment, (3) self-contained recreational vehicle (live-in trailer), (4) airplane, (5) bus, (6) train, (7) ship or boat, and (8) other.

Metropolitan Statistical Area. A Metropolitan Statistical Area (MSA) is an integrated economic and social unit with a large population nucleus. Each MSA consists of one or more counties meeting standards of population and metropolitan character, except New England where towns and cities rather than counties are the basic geographic units.

Nights Away from Home. The number of nights spent away from home on one trip, including nights spent at the destination and enroute. It is possible for a trip not to involve an overnight away from home if the traveler took a trip of 100 miles or more and returned home the same day.

Outside the U.S. The geographic area comprising all foreign destinations.

Package Tour. A pre-paid travel package which includes at least a place to stay and transportation by air or bus.

Person-Trip. This is a person on a trip. If one person reported three different trips, his/her travel is counted as three trips and three person-trips. If three persons from a household go together on one trip, their travel is counted as one trip and three person-trips.

Pleasure Trip. Any trip where the purpose of the trip is given as "visits to friends and relatives, outdoor recreation (hunting, fishing, boating, camping) or entertainment (sightseeing, theater, sports)."

Primary Purpose of Trip. The primary purpose is the main activity on this trip and is classified as follows: (1) visit friends and relatives, (2) convention, seminar, meeting, (3) business, (4) outdoor recreation (hunting, fishing, boating, camping), (5) entertainment (sightseeing, theater, sports), (6) personal, family (medical, funeral, wedding), and (7) other.

The main purpose for the trip is ascribed to each person on the trip. If a trip is taken by the respondent and two other people traveling with him/her to visit friends and relatives, three person-trips are counted for this purpose.

Projected Total. These figures are the estimated number of trips or person-trips projected to have been taken by U.S. residents. The estimated trip volume is projected to the U.S. resident adult population, while the person-trip volume covers all travelers (children included).

Raw Total. This is the actual number trips taken by respondents with the exception of multiple identical trips taken by the same respondent.

Respondent. This is the person completing the telephone interview.

Round-Trip Miles. These are the twice the calculated one-way, straight-line miles from origin to destination. These are calculated for domestic trips only. See "Straight-Line Miles."

Straight-Line Miles. This is a "great circle" distance approximation using mathematically derived coordinates. Straight-line miles are calculated by computer program and adjusted to trip distance.

Travel Party Size. Americans traveling together are categorized by size according to the number of household members on a trip.

Travel Party Structure. The age and number of household members on a trip determine the party structure of a trip.

Traveler. Respondents who make one or more trips at least 100 miles away from home are counted as travelers. Travelers are only counted once regardless of how many trips are taken or how many people are on the trip.

Trip. A trip is counted each time one person goes to a place at least 100 miles away from home and returns. The following types of trips are specifically excluded: (1) travel as part of an operation crew on a train, airplane, truck, bus or ship, (2) commuting to a place of work, and (3) student trips to or from school.

In this survey, respondents are asked to report all trips of 75 miles or more, one-way, taken during the month immediately preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimates of trips. This is done in an effort to minimize failure to report trips of 100 miles or more due to respondent error in recall.

Vacation Trip. Vacation is considered to be an occasion when trips are taken, but is not listed as a purpose or reason for travel. The respondent is asked for each trip reported, "Was this a vacation trip?"

Weekend Trip. Each trip was classified as to whether it is weekend trip by asking the respondents, "Was this a weekend or long weekend trip" for each trip reported.

NATIONAL TRAVEL SURVEY METHODOLOGY

The National Travel Survey is based upon data collected each month by telephone interviews from a national probability sample of 1,500 adults (age 18+) representing the total adult, civilian, non-institutional population of the contiguous United States. The sample design is a two-stage, stratified, internally replicated national probability sample using a new sample each month.

Respondents are asked about all trips of 75 miles or more, one-way, taken during the month preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimate of the number of trips. Starting in 1986, data are also being collected on trips of less than 100 miles which included one or more nights spent in paid accommodations. Demographic information is collected from all 1,500 respondents each month. In addition, a random sample of 1,000 respondents (both travelers and non-travelers) are asked a series of questions concerning vacation travel intentions.

In projecting results, an unequal probability of selection of individuals is corrected by weighting all respondents where the weight given each individual is inversely proportional to the probability of selection of the individual. Such weighting is used to correct for the limitation of one respondent per household in order to give a more accurate count of all trips taken and to correct for unequal probabilities of selection among household members. Weighting is also done when necessary by demographic factors to compensate for any random variation in response.

ESTIMATES OF SAMPLING ERROR

Theoretical estimates for the key projections of this survey are only able to provide a rough indication of sampling error, because of weighting, clustering and response rate. For these reasons, the sample was designed to utilize the method of internal replication to obtain a more accurate measure of actual sampling error. Accordingly, the following table may be used as a guide in determining the range for the major categories of projected trips and person-trips at the 95 percent confidence level.

INTRODUCTION

Since 1979, the U.S. Travel Data Center has conducted a monthly National Travel Survey to provide timely and relevant information on major trends in American travel activity. The survey is conducted by telephone with national probability samples of 1,500 adult residents of the contiguous U.S. each month.

Seasonal and annual summaries of results are published regularly for use by Data Center members and other interested marketers and researchers. This report on winter 1989-90 travel and other reports from the Data Center's National Travel Survey contribute to a better understanding of changing travel markets.

This TRAVEL MARKET REPORT provides detailed tabulations of the National Travel Survey and offers extensive data on trip characteristics and traveler demographics which are not usually available. Now the tabulations have been integrated with the Executive Briefing, which provides a summary of seasonal and annual travel and economic information, as well as analysis of the tabulations.

The WINTER 1989-90 TRAVEL MARKET REPORT encompasses U.S. resident travel over December 1989, January and February 1990, measured through the monthly National Travel Survey. The tables are based on projected volumes of "trips" and "person-trips", as defined below.

Travel volumes and characteristics are projectable to the U.S. adult population of 180.8 million. For example, an estimated volume of 136.8 million trips were taken by U.S. resident adults during the winter of 1989-90. A trip is counted each time one adult travels 100 miles or more away from home, and returns.

The term "person-trip" individually counts all of the household members traveling together on a trip. Thus the estimated 259.9 million total person-trips for winter 1989-90 includes adults and children traveling away from home on trips.

Because the sample for the National Travel Survey is representative of the contiguous U.S. adult population, data from this report are limited to travel by U.S. residents to both domestic and international destinations. This report does not include data on foreign visitor activity in the U.S.

GUIDE TO READING TABLES

The tables in the TRAVEL MARKET REPORT are divided into three sections:

Tables	Base	Pages
Trip Characteristics	Trips	1 - 30
Trip Characteristics	Person-Trips	31 - 60
Demographic Characteristics	Trips	61 - 75

There are three pages for each table, showing a variety of types of travel, demographic characteristics and regions of destination and origin. A key to abbreviations for all column headings is given on the following page.

In addition to the projected travel volume base, each table gives the "raw total" respondent base for all types of travel presented. Raw totals are the actual number of trips taken by respondents, excluding multiple identical trips taken by the same respondent.

Column percentages should add to 100 percent (may vary a few percentage points due to rounding), except for the primary purpose of trip and lodging tables which may add to more than 100 percent due to multiple responses.

The final section characterizes the volume of trips taken according to several demographic and household characteristics of adult travelers. For example, marital status, sex, age, education and occupation refer to the adult traveler reporting one or more qualifying trips. Family income, household structure and home ownership characterize the households of these adult travelers.

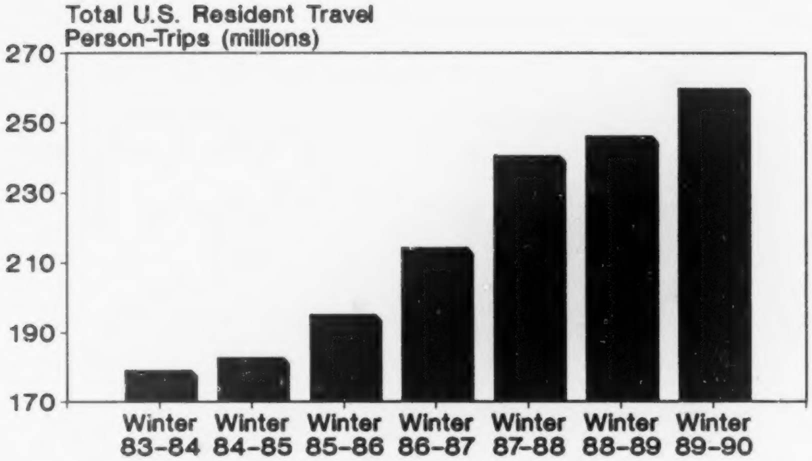
EXECUTIVE SUMMARY:

SUMMARY OF TABLES

EXECUTIVE BRIEFING
WINTER 1989-90



WINTER 1989-90 TRAVEL SUMMARY

- o Nearly 260 million person-trips were taken during the winter of 1989-90, a 5.6 percent increase over the same period last year. One-hundred and thirty-six million trips were taken during the winter, up 1.3 percent over the same season last year.
- o Hotel/motel volumes posted the largest increase over last winter in terms of person-trips. Somewhat shorter stays in hotel/motels, however, were noted. All other types of travel experienced a rise in volume as well, such as business/convention and weekend, with increases of 12.7 and 14.0 percent, respectively.
- o Air travel, as measured by person-trips, showed a slight increase of 1.2 percent over last winter.

- The Southeast region hosted the most travelers during winter 1989-90 (79.7 million person-trips), while the Northeast was the least traveled region (28.1 million person-trips). These two regions also posted the greatest increase and decline compared to the winter 1989-90 season.

- Nearly three-fourths of the winter 1989-90 person-trips were taken for pleasure purposes. Of these, 48 percent of the travelers stayed with friends/relatives while 35 percent stayed in commercial lodgings. Five percent of all pleasure travel involved day trips only.

- Of the 47 million business person-trips taken during the winter, 12 percent were also considered to be a vacation trip. Business travelers stayed an average of 3.4 nights on their trips, compared to 4.2 nights for all travelers.

- Seventy percent of all business travelers stayed in paid accommodations, while 14 percent lodged with friends and relatives. Thirteen percent of all business person-trips involved no overnight stay.

- Average round-trip distances and average trip durations during the winter 1989-90 season were very similar to those of a year ago. People traveling during the season went an average of 980 round-trip miles and spent, on average, 4.2 nights away from home.

- Economic conditions during winter 1989-90 were somewhat weaker than those of the previous year. Payroll employment and personal outlays only rose 2.3 percent and 7.3 percent, respectively. Disposable income also rose at a slower rate (7.5 percent) than that of last year (9.5 percent).

- Travel prices rose 6.5 percent during the winter, compared to a 3.9 percent increase of the previous year. Consumer prices increased five percent over winter 1989-90, only slightly above the increase of the previous year (4.7 percent).

GLOSSARY OF TERMS

ADI. An ADI or area of dominant influences, as defined by the Arbitron Ratings Company, includes all counties in which television stations from a given city are watched more than television stations from any other city. Therefore, an ADI includes not only the metropolitan statistical area (MSA), but also all the surrounding towns and counties receiving the major share of their television exposure from that point.

ADI of Destination. Following Arbitron's standards, four county types are identified: "A" Counties are those counties located in the 25 most populated metropolitan statistical areas (MSAs) in the U.S.; "B" Counties have populations of or are located within MSAs of over 150,000 (but are not "A" Counties); "C" Counties have populations of or are located within MSAs of 35,000 to 150,000; "D" Counties describe all others. Also, those who visit the actual city within the top 25 MSAs are shown as a component of the "A" County category.

ADI of Origin. The geographic area of origin is defined as the ADI in which the respondent resides. Following Arbitron's standards, the ADIs of origin are classified according to four population categories: Over one million (large); 250,000 to 999,999 (medium); 50,000 to 249,999 (small); and under 50,000 (also small).

Air Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "airplane".

Auto Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "auto or truck without camping equipment, auto or truck with camper trailer or camping equipment, or self-contained recreational vehicle (live-in camper or RV)."

Business Trip. Any trip where the purpose of the trip is given as "business, convention, seminar or meeting."

Census Region of Origin/Destination. Regional breakdowns of the U.S. are as defined by the U.S. Bureau of the Census: New England, Mid-Atlantic, South Atlantic, East South Central, East North Central, West South Central, West North Central, Mountain, and Pacific.

Destination. The farthest destination reached by the respondent on one trip.

Family. A "family" includes the household head and all relatives who are currently members of the household.

Family Income. The total combined annual income of the respondent's family.

Household. A "household" comprises all persons who occupy a "housing unit", that is, a house, an apartment, or other group of rooms, or a room that constitutes separate living quarters.

Lodging. Information is gathered on seven lodging categories: (1) homes of friends and relatives; (2) hotels, motels, motor hotels and tourist courts; (3) rented cabins, condominiums and vacation homes; (4) owned cabins, condominiums and vacation homes; (5) campers, trailers, recreational vehicles, and tents; (6) enroute, for example, nights spent in a common carrier; (7) other.

Mode of Transportation. Each trip is classified according to the respondent's answer to the question, "What was the one type of transportation used to cover most of the miles on this trip?" The survey gathers data by eight classifications: (1) auto or truck without camping equipment; (2) auto or truck with camper trailer or camping equipment; (3) self-contained recreational vehicle (live-in trailer); (4) airplane; (5) bus; (6) train; (7) ship or boat; (8) other.

Metropolitan Statistical Area. A Metropolitan Statistical Area (MSA) is an integrated economic and social unit with a large population nucleus. Each MSA consists of one or more counties meeting standards of population and metropolitan character, except New England where towns and cities rather than counties are the basic geographic units.

Nights Away From Home. The number of nights spent away from home on one trip, including nights spent at the destination and enroute. It is possible for a trip not to involve an overnight away from home if the traveler took a trip of 100 miles or more and returned home the same day.

Outside the U.S. The geographic area comprising all foreign destinations.

Package Tour. A pre-paid travel package which includes at least a place to stay and transportation by air or bus.

Person Trip. This is a person on a trip. If one person reported three different trips, his/her travel is counted as three trips and three person-trips. If three persons from a household go together on one trip, their travel is counted as one trip and three person-trips.

Pleasure Trip. Any trip where the purpose of the trip is given as "visits to friends and relatives, outdoor recreation (hunting, fishing, boating, camping) or entertainment (sightseeing, theater, sports)."

Primary Purpose of Trip. The primary purpose is the main activity on this trip and is classified as follows: (1) visit friends and relatives; (2) convention, seminar, meeting; (3) business; (4) outdoor recreation (hunting, fishing, boating, camping); (5) entertainment (sightseeing, theater, sports); (6) personal, family (medical, funeral, wedding); (7) other.

The main purpose for the trip is ascribed to each person on the trip. If a trip is taken by the respondent and two other people traveling with him/her to visit friends and relatives, three person-trips are counted for this purpose.

Projected Total. These figures are the estimated number of trips or person-trips projected to have been taken by U.S. residents. The estimated trip volume is projected to the U.S. resident adult population, while the person-trip volume covers all travelers (children included).

Raw Total. This is the actual number trips taken by respondents with the exception of multiple identical trips taken by the same respondent.

Respondent. This is the person completing the telephone interview.

Round-Trip Miles. These are twice the calculated one-way, straight-line miles from origin to destination. These are calculated for domestic trips only. See "Straight-Line Miles."

Straight-Line Miles. This is a "great circle" distance approximation using mathematically derived coordinates. Straight-line miles are calculated by computer program and adjusted to trip distance.

Travel Party Size. Americans traveling together are categorized by size according to the number of household members on a trip.

Travel Party Structure. The age and number of household members on a trip determine the party structure of a trip.

Traveler. Respondents who make one or more trips at least 100 miles away from home are counted as travelers. Travelers are only counted once regardless of how many trips are taken or how many people are on the trip.

Trip. A trip is counted each time one person goes to a place at least 100 miles away from home and returns. The following types of trips are specifically excluded: (1) travel as part of an operation crew on a train, airplane, truck, bus or ship; (2) commuting to a place of work; (3) student trips to or from school.

In this survey, respondents are asked to report all trips of 75 miles or more, one-way, taken during the month immediately preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimates of trips. This is done in an effort to minimize failure to report trips of 100 miles or more due to respondent error in recall.

Vacation Trip. Vacation is considered to be an occasion when trips are taken, but is not listed as a purpose or reason for travel. The respondent is asked for each trip reported, "Was this a vacation trip?"

Weekend Trip. Each trip was classified as to whether it is a weekend trip by asking the respondents, "Was this a weekend or long weekend trip" for each trip reported.

Hello, my name is ____________ and I'm calling for the US Travel Data Center. We are conducting a study to learn how often people in the United States take trips.

I'd like to begin by asking . . .

1. Approximately, how many trips have you taken away from home of at least 75 miles, one way, in the past 12 months? Please do not include trips taken in regular commuting to and from work or school, or trips taken as a flight attendant or operator.

   ______ Number, if any

   IF RESPONDENT UNABLE TO GIVE SPECIFIC NUMBER, PROBE: In the past 12 months, would you say that you have taken ...

   1 1 or 2 trips
   2 3 to 5 trips
   3 6 to 9 trips
   4 10 to 20 trips
   5 More than 20 trips

   IF NONE, SKIP TO D1.

2. How many trips of at least 75 miles, one way, did you take away from home between the first and the ____ of [CURRENT SURVEY MONTH]? Please include trips that may have started in the previous month but ended after the first of [CURRENT SURVEY MONTH].

   IF NO TRIPS TAKE IN Q.2, ASK:

NATIONAL TRAVEL SURVEY METHODOLOGY

The National Travel Survey is based upon data collected each month by telephone interviews from a national probability sample of 1,500 adults (age 18+) representing the total adult, civilian, non-institutional population of the contiguous United States. The sample design is a two-stage, stratified, internally replicated national probability sample using a new sample each month.

Respondents are asked about all trips of 75 miles or more, one-way, taken during the month preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimate of the number of trips. Starting in 1986, data are also being collected on trips of less than 100 miles which included one or more nights spent in paid accommodations. Demographic information is collected from all 1,500 respondents each month.

In projecting results, an unequal probability of selection of individuals is corrected by weighting all respondents where the weight given each individual is inversely proportional to the probability of selection of the individual. Such weighting is used to correct for the limitation of one respondent per household in order to give a more accurate count of all trips taken and to correct for unequal probabilities of selection among household members. Weighting is also done when necessary by demographic factors to compensate for any random variation in response.

ESTIMATES OF SAMPLING ERROR

Theoretical estimates for the key projections of this survey are only able to provide a rough indication of sampling error, because of weighting, clustering and response rate. For these reasons, the sample was designed to utilize the method of internal replication to obtain a more accurate measure of actual sampling error. Accordingly, the following table may be used as a guide in determining the range for the major categories of projected trips and person-trips at the 95 percent confidence level.

INTRODUCTION

Since 1979, the U.S. Travel Data Center has conducted a monthly National Travel Survey to provide timely and relevant information on major trends in American travel activity. The survey is conducted by telephone with national probability samples of 1,500 adult residents of the contiguous U.S. each month.

Seasonal and annual summaries of results are published regularly for use by Data Center members and other interested marketers and researchers. This report on spring 1990 travel and other reports from the Data Center's National Travel Survey contribute to a better understanding of changing travel markets.

This TRAVEL MARKET REPORT provides detailed tabulations of the National Travel Survey and offers extensive data on trip characteristics and traveler demographics which are not usually available. Now the tabulations have been integrated with the Executive Briefing, which provides a summary of seasonal and annual travel and economic information, as well as analysis of the tabulations.

The SPRING 1990 TRAVEL MARKET REPORT encompasses U.S. resident travel over March, April, and May 1990, measured through the monthly National Travel Survey. The tables are based on projected volumes of "trips" and "person-trips", as defined below.

Travel volumes and characteristics are projectable to the U.S. adult population of 180.8 million. For example, an estimated volume of 148.2 million trips were taken by U.S. resident adults during the spring of 1990. A trip is counted each time one adult travels 100 miles or more away from home, and returns.

The term "person-trip" individually counts all of the household members traveling together on a trip. Thus the estimated 285.5 million total person-trips for spring 1990 includes adults and children traveling away from home on trips.

Because the sample for the National Travel Survey is representative of the contiguous U.S. adult population, data from this report are limited to travel by U.S. residents to both domestic and international destinations. This report does not include data on foreign visitor activity in the U.S.

GUIDE TO READING TABLES

The tables in the TRAVEL MARKET REPORT are divided into three sections:

Tables	Base	Pages
Trip Characteristics	Trips	1 - 30
Trip Characteristics	Person-Trips	31 - 60
Demographic Characteristics	Trips	61 - 75

There are three pages for each table, showing a variety of types of travel, demographic characteristics and regions of destination and origin. A key to abbreviations for all column headings is given on the following page.

In addition to the projected travel volume base, each table gives the "raw total" respondent base for all types of travel presented. Raw totals are the actual number of trips taken by respondents, excluding multiple identical trips taken by the same respondent.

Column percentages should add to 100 percent (may vary a few percentage points due to rounding), except for the primary purpose of trip and lodging tables which may add to more than 100 percent due to multiple responses.

The final section characterizes the volume of trips taken according to several demographic and household characteristics of adult travelers. For example, marital status, sex, age, education and occupation refer to the adult traveler reporting one or more qualifying trips. Family income, household structure and home ownership characterize the households of these adult travelers.

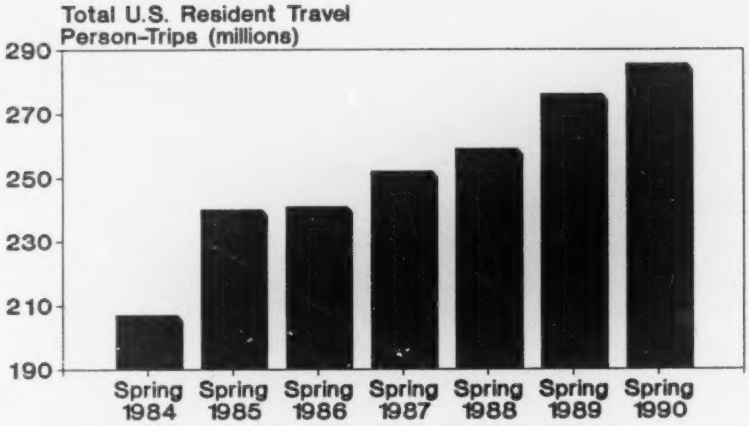
EXECUTIVE SUMMARY:

SUMMARY OF TABLES

EXECUTIVE BRIEFING
SPRING 1990



SPRING 1990 TRAVEL SUMMARY

- Nearly 286 million person-trips were taken during the spring of 1990, a 3.6 percent increase over the same period last year. One-hundred and forty-eight million trips were taken during the spring, up 1.4 percent over the same season last year.

- Hotel/motel volumes posted the largest increase over last spring in terms of person-trips. Slightly longer stays in hotel/motels were also noted. Most other types of travel experienced a rise in volume as well, especially weekend travel. Business/convention and air travel decreased slightly over last spring, with declines of 5.4 and 3.5 percent, respectively, on a person-trip basis.

- Vacation travel, as measured by person-trips, showed an increase of 7.8 percent over last spring.

- The Southeast region hosted the most travelers during spring 1990 (74.8 million person-trips), while the Great Lakes was the least traveled region (36.7 million person-trips). These two regions also posted the greatest decline and increase compared to the spring 1990 season.

- Three-fourths of the spring 1990 person-trips were taken for pleasure purposes. Of these, 48 percent of the travelers stayed with friends/relatives while 39 percent stayed in commercial lodgings. Six percent of all pleasure travel involved day trips only.

- Of the 39.0 million business trips taken during the spring, 20 percent were also considered to be a vacation trip. Business travelers stayed an average of 3.4 nights on their trips.

- On a trip basis, 72 percent of all business travelers stayed in paid accommodations, while 19 percent lodged with friends and relatives. Ten percent of all business trips involved no overnight stay.

- Average round-trip distances during the spring 1990 season were lower, overall, than those of a year ago, while average trip duration increased in almost every category. People traveling during the season went an average of 830 round-trip miles and spent, on average, 3.8 nights away from home.

- Economic conditions during spring 1990 were somewhat weaker than those of the previous year. Real GNP and payroll employment only rose 2.3 percent and 2.0 percent, respectively. Personal outlays also rose at a slower rate (6.6 percent) than that of last year (8.0 percent).

- Travel prices rose 5.8 percent during the spring, compared to a 5.5 percent increase of the previous spring. Consumer prices increased 4.8 percent over spring 1990, only slightly below the increase of the previous year (5.2 percent).

GLOSSARY OF TERMS

ADI. An ADI or area of dominant influences, as defined by the Arbitron Ratings Company, includes all counties in which television stations from a given city are watched more than television stations from any other city. Therefore, an ADI includes not only the metropolitan statistical area (MSA), but also all the surrounding towns and counties receiving the major share of their television exposure from that point.

ADI of Destination. Following Arbitron's standards, four county types are identified: "A" Counties are those counties located in the 25 most populated metropolitan statistical areas (MSAs) in the U.S.; "B" Counties have populations of or are located within MSAs of over 150,000 (but are not "A" Counties); "C" Counties have populations of or are located within MSAs of 35,000 to 150,000; "D" Counties describe all others. Also, those who visit the actual city within the top 25 MSAs are shown as a component of the "A" County category.

ADI of Origin. The geographic area of origin is defined as the ADI in which the respondent resides. Following Arbitron's standards, the ADIs of origin are classified according to four population categories: Over one million (large); 250,000 to 999,999 (medium); 50,000 to 249,999 (small); and under 50,000 (also small).

Air Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "airplane".

Auto Mode. Any trip in which the one type of transportation used to cover most of the miles on that trip is given as "auto or truck without camping equipment, auto or truck with camper trailer or camping equipment, or self-contained recreational vehicle (live-in camper or RV)."

Business Trip. Any trip where the purpose of the trip is given as "business, convention, seminar or meeting."

Census Region of Origin/Destination. Regional breakdowns of the U.S. are as defined by the U.S. Bureau of the Census: New England, Mid-Atlantic, South Atlantic, East South Central, East North Central, West South Central, West North Central, Mountain, and Pacific.

Destination. The farthest destination reached by the respondent on one trip.

Family. A "family" includes the household head and all relatives who are currently members of the household.

Family Income. The total combined annual income of the respondent's family.

Household. A "household" comprises all persons who occupy a "housing unit", that is, a house, an apartment, or other group of rooms, or a room that constitutes separate living quarters.

Lodging. Information is gathered on seven lodging categories: (1) homes of friends and relatives; (2) hotels, motels, motor hotels and tourist courts; (3) rented cabins, condominiums and vacation homes; (4) owned cabins, condominiums and vacation homes; (5) campers, trailers, recreational vehicles, and tents; (6) enroute, for example, nights spent in a common carrier; (7) other.

Mode of Transportation. Each trip is classified according to the respondent's answer to the question, "What was the one type of transportation used to cover most of the miles on this trip?" The survey gathers data by eight classifications: (1) auto or truck without camping equipment; (2) auto or truck with camper trailer or camping equipment; (3) self-contained recreational vehicle (live-in trailer); (4) airplane; (5) bus; (6) train; (7) ship or boat; (8) other.

Metropolitan Statistical Area. A Metropolitan Statistical Area (MSA) is an integrated economic and social unit with a large population nucleus. Each MSA consists of one or more counties meeting standards of population and metropolitan character, except New England where towns and cities rather than counties are the basic geographic units.

Nights Away From Home. The number of nights spent away from home on one trip, including nights spent at the destination and enroute. It is possible for a trip not to involve an overnight away from home if the traveler took a trip of 100 miles or more and returned home the same day.

Outside the U.S. The geographic area comprising all foreign destinations.

Package Tour. A pre-paid travel package which includes at least a place to stay and transportation by air or bus.

Person-Trip. This is a person on a trip. If one person reported three different trips, his/her travel is counted as three trips and three person-trips. If three persons from a household go together on one trip, their travel is counted as one trip and three person-trips.

Pleasure Trip. Any trip where the purpose of the trip is given as "visits to friends and relatives, outdoor recreation (hunting, fishing, boating, camping) or entertainment (sightseeing, theater, sports)."

Primary Purpose of Trip. The primary purpose is the main activity on this trip and is classified as follows: (1) visit friends and relatives; (2) convention, seminar, meeting; (3) business; (4) outdoor recreation (hunting, fishing, boating, camping); (5) entertainment (sightseeing, theater, sports); (6) personal, family (medical, funeral, wedding); (7) other.

The main purpose for the trip is ascribed to each person on the trip. If a trip is taken by the respondent and two other people traveling with him/her to visit friends and relatives, three person-trips are counted for this purpose.

Projected Total. These figures are the estimated number of trips or person-trips projected to have been taken by U.S. residents. The estimated trip volume is projected to the U.S. resident adult population, while the person-trip volume covers all travelers (children included).

Raw Total. This is the actual number trips taken by respondents with the exception of multiple identical trips taken by the same respondent.

Respondent. This is the person completing the telephone interview.

Round-Trip Miles. These are twice the calculated one-way, straight-line miles from origin to destination. These are calculated for domestic trips only. See "Straight-Line Miles."

Straight-Line Miles. This is a "great circle" distance approximation using mathematically derived coordinates. Straight-line miles are calculated by computer program and adjusted to trip distance.

Travel Party Size. Americans traveling together are categorized by size according to the number of household members on a trip.

Travel Party Structure. The age and number of household members on a trip determine the party structure of a trip.

Traveler. Respondents who make one or more trips at least 100 miles away from home are counted as travelers. Travelers are only counted once regardless of how many trips are taken or how many people are on the trip.

Trip. A trip is counted each time one person goes to a place at least 100 miles away from home and returns. The following types of trips are specifically excluded: (1) travel as part of an operation crew on a train, airplane, truck, bus or ship; (2) commuting to a place of work; (3) student trips to or from school.

In this survey, respondents are asked to report all trips of 75 miles or more, one-way, taken during the month immediately preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimates of trips. This is done in an effort to minimize failure to report trips of 100 miles or more due to respondent error in recall.

Vacation Trip. Vacation is considered to be an occasion when trips are taken, but is not listed as a purpose or reason for travel. The respondent is asked for each trip reported, "Was this a vacation trip?"

Weekend Trip. Each trip was classified as to whether it is a weekend trip by asking the respondents, "Was this a weekend or long weekend trip" for each trip reported.

NATIONAL TRAVEL SURVEY METHODOLOGY

The National Travel Survey is based upon data collected each month by telephone interviews from a national probability sample of 1,500 adults (age 18+) representing the total adult, civilian, non-institutional population of the contiguous United States. The sample design is a two-stage, stratified, internally replicated national probability sample using a new sample each month.

Respondents are asked about all trips of 75 miles or more, one-way, taken during the month preceding the interview. Those trips subsequently calculated to be less than 100 miles in one-way, straight-line distance are excluded from the estimate of the number of trips. Starting in 1986, data are also being collected on trips of less than 100 miles which included one or more nights spent in paid accommodations. Demographic information is collected from all 1,500 respondents each month.

In projecting results, an unequal probability of selection of individuals is corrected by weighting all respondents where the weight given each individual is inversely proportional to the probability of selection of the individual. Such weighting is used to correct for the limitation of one respondent per household in order to give a more accurate count of all trips taken and to correct for unequal probabilities of selection among household members. Weighting is also done when necessary by demographic factors to compensate for any random variation in response.

ESTIMATES OF SAMPLING ERROR

Theoretical estimates for the key projections of this survey are only able to provide a rough indication of sampling error, because of weighting, clustering and response rate. For these reasons, the sample was designed to utilize the method of internal replication to obtain a more accurate measure of actual sampling error. Accordingly, the following table may be used as a guide in determining the range for the major categories of projected trips and person-trips at the 95 percent confidence level.

ESTIMATES OF SAMPLING ERROR FOR PROJECTED TRAVEL VOLUMES
SPRING 1990 TRAVEL

	TRIPS (MILLIONS)		PERSON-TRIPS (MILLIONS)	
	ESTIMATE	RANGE	ESTIMATE	RANGE
Total	136.8	134.8 - 138.8	259.9	256.9 - 262.9
Vacation	83.6	82.1 - 85.1	178.5	176.5 - 180.5
Pleasure	87.7	86.2 - 89.2	187.9	185.9 - 189.9
Bus/Conv	35.5	34.5 - 36.5	47.0	46.0 - 48.0
Weekend	59.2	58.2 - 60.2	124.1	122.6 - 125.6
Auto	95.1	93.6 - 96.6	198.4	200.4 - 196.4
Air	34.1	33.1 - 35.1	50.9	49.9 - 51.9
Hotel	62.0	61.0 - 63.0	110.6	109.1 - 112.1

In looking at characteristics of trips and person-trips for the major categories reported above, it may be helpful to refer to the following chart, which indicates the approximate statistical variability of the estimates contained in this report at the 95 percent confidence level.

APPROXIMATE SAMPLING TOLERANCE FOR SURVEY PERCENTAGES AT OR NEAR THESE LEVELS
